Writing

This week in writing we practiced our recount writing in a diary. We wrote a diary entry from the perspective of someone working in Harland and Wolff building the Titanic. It could be any time from when they started building till when they finished building the titanic. It sounded like a really hard job for not much money.

Science

This week we have been learning about buoyancy and how it explain the titanic sinking. Buoncy is the force that makes things float. We got into groups and got some tinfoil a bucket of water and coins, we used the tinfoil to make a boat to carry the coins in it we put it in the bucket of water and seen how many coins it could hold. The boats that held the most coins had a large surface area. The Titanic sank because water got inside pushed out the air, water is denser than air.

Social Studies

This week in social studies we started a new topic on the Titanic. We drew a Titanic cross section and looked at all the interesting rooms it had and where they were positioned. For example the 3rd class quarters were above the boiler because they weren't as important as 1st and 2nd class.

R.E

This week we learnt about Fatima and the miracle of the sun. Fatima is another name for Mary. We learnt Fatima appeared to 3 kids and told them that the war will end. She performed a miracle in front of their eyes. See also performed the miracle of the sun when the sun lit up lots of colours. We then write our own special prayer to Fatima, and painted our own miracle of the sun.

We layered pastels with dark paint on top.

Numeracy

In numeracy this week we learnt about function machines. We learnt that if you put a number in (input) then it is multiplied, added to, taken away from or divided, and then comes out different (output). We also made our own function machines with a function, 3 inputs and 3 outputs, and others had to find out what the function was. In maths we learnt about finding volume of a cuboid, we measured different cuboid shapes around the class.

P.E

In p.e this week we did a warmup called chain tig. And then we played volcanoes and destroyer. So one team had to flip the volcano the right way up and the other team had to destroy it. We then we did Rapid Races. So the teacher gave us something to do until we got to the half way line and then we ran back.
