

P6b Blog WB 04/05/2021

Maths

This week in maths we were working on balancing equations and graphs. The graphs were line graphs, and we were plotting our own based on how many people of different classes boarded the Titanic lifeboats. We also did balancing equations and solving equations. We have learnt the steps to complete an algebra formula.

R.E

This week in RE we were learning about our emotions, through Gods loving plan we thought about how our emotions would change, for example feeling more moody. We learnt a good way to help this is to eat well, exercise and drink water. We should also show kindness to each other as you never know how someone else is feeling. P6b are a team and we will support each other during these changes.

Science blog

In science this week we did an experiment with clay, spaghetti and linguine. We did this experiment to understand why the titanic sunk. We put the clay into tube shapes and put spaghetti and linguine to symbolise the rivets that made the Titanic then we put them on some string and weights then hung it from a chair to see which material held the best. We then we wrote up our experiment.

Titanic Disaster Blog

This week we the reason behind the Titanic disaster. We found out that you should always keep your radio on so you can hear what's happening with other ships close by. We also found out that the manager of the White Star Line pushed the captain to get through the ocean under 6 days while there was icebergs in the sea. We also found out that they knew that there was icebergs in the ocean from other ships telling them from the radio but still risked going through the sea in that area. It looks like there wasn't just one reason for the disaster, there were many reasons. We then began to create news reports about the disaster.

P.E Blog

In P.E we did the high jump, we did the scissor and the flop onto crash mats in the gym hall, it was really fun! We had little coloured mats to mark where our feet should go from each side of the hall. You would jump over a high string on two poles, you do the flop like jumping on the sofa and the scissors like one leg then the other ✂️🛏️.

Art

Inspired by Jean DuBuffet's Landscape art, we created our own using mud. We went outside and collected mud as well as stones and sticks for scraping patterns. We made lines with masking tape and then smudged the mud all over. We then used sticks and stones to create patterns.
